Adriana Smaranda Băban PhD  
Mircea Miclea PhD

**Affiliated academic staff**

Ion Dafinoui PhD  
Gabriel Bădescu PhD  
Oana Benga PhD

**Description**

The Doctoral School of *Applied Cognitive Psychology* is centered on the development of advanced research programs in cognitive psychology applied in health, education and work. The main objectives of this Doctoral School reside in improving the theoretical and empirical knowledge, in the national and international dissemination of the results, and in ensuring that the practice of psychology is evidence-based. For the PhD students we provide a high-quality environment for their development, theoretical education and integration in the general theme of scientific research of their PhD supervisor. The PhD students and their supervisors are involved in projects and activities of high scientific and applied relevance (for example FP7, CNCS, interdisciplinary groups and international networks of study in collaboration).

The Doctoral research themes are mainly focused on the primary domains: health, vulnerability and risk, respectively intervention, prevention and development, approached through the perspective of cognitive sciences. The transfer of knowledge and research abilities is ensured by the courses, conferences, workshops, individual meetings or debates in the groups of interests.
